

ZACHARY STREETER

PERSONAL INFORMATION

Born in West Monroe, Louisiana, 23 May 1988

email zacharylouis42@gmail.com

LinkedIn <https://www.linkedin.com/in/zachary-streeter-44a323102/>

github <https://github.com/zstreeter>

Address 2314 Bonar St. Berkeley, Ca 94702

phone (M) +1 (318) 614 6728

Familial Status Single, no children

GOALS

Seek understanding while providing service to others.

INTERNSHIPS AND RESEARCH POSITIONS

2012–2013 *Synchrotron Radiation Center*

SRC Built gas handling systems, ran leak checks for high vacuum line, wrote Igor Pro code for data analysis, and worked on calibrating the monochrometer. Also attended lectures in relativistic electrodynamics and worked on electrodynamic problem sets.

Reference: Gary FINDLEY +1 (318) 342 1835 · findley@ulm.edu

Summer 2014 *Center for Advanced Microstructures and Devices*

CAMD Became a user in order to continue research from SRC.

Reference: Cherice EVANS +1 (718) 997 4216 · cherice.evans@qc.cuny.edu

Spring 2015 *Brookhaven National Laboratory*

BNL Performed experiments with soft X-rays utilizing the Linear Electron Accelerator Facility (LEAF) and the van de Graaff. Prepared samples in glove box and worked on purifying Xenon.

Reference: Richard Holroyd +1 (631) 344 4329 · holroydr@optonline.net

Summer 2016 to Present *Lawrence Berkeley National Laboratory*

LBNL Created fully dimensional potential energy surfaces for H_2O^{++} using MOLPRO and Columbus Quantum Chemistry packages. Honed programming skills in C, C++, Fortran, and Python. Used NERSC supercomputers EDISON, Lawrencium, and CORI for running large parallel code. Became proficient in parallel programming using PETSC, MPI, CUDA, and OpenMP.

Reference: Clyde W. McCurdy +1 (510) 486 4283 · cwmccurdy@lbl.gov

EDUCATION

2007–2009, 2011–2015 *The University of Louisiana, Monroe*

Bachelor of Science GPA: 3.46 · School: School of Sciences

Major (Concentration): Biology (Chemical Biology)
 Personal Courses: Attended formal lectures in Statistical Mechanics, Quantum Mechanics, Electricity and Magnetism, and Relativistic Electrodynamics.
 Advisor: Prof. Gary FINDLEY & Prof. Ann FINDLEY

*Doctor of
Philosophy*

2015-
present The University of California, Davis

GPA: 3.7 · School: Chemistry
 Description: This degree is a PhD in Theoretical Chemical Physics.
 Advisor: Prof. Clyde W. McCURDY

Notable Course

Fall 2019 The University of California, Berkeley

CS294 – 73 *Software Engineering for Scientific Computing*
 School: Computer Science
 Description: This graduate course focused on the seven motifs in scientific computing: dense and sparse linear algebra, structured and unstructured grid methods, particle methods, fast Fourier transforms (FFT), and Monte Carlo.
 Professor: Phillip COLELLA · colella@eecs.berkeley.edu

Notable Course

Spring
2020 The University of California, Berkeley

CS267 *Applications of Parallel Computers*
 School: Computer Science
 Description: Graduate course focused on models for parallel programming. Overview of parallelism on scientific applications and study of parallel algorithms for linear algebra, particles, meshes, sorting, FFT, graphs, machine learning, etc. Survey of parallel machines and machine structures. Programming shared- and distributed-memory parallel computers, GPUs, and cloud platforms. Parallel programming languages, compilers, libraries and toolboxes. Data partitioning techniques. Techniques for synchronization and load balancing. Detailed study and algorithm/program development of medium sized applications.
 Professor: Katherine A. YELICK · yelick@cs.berkeley.edu
 Professor: James DEMMEL · demmel@cs.berkeley.edu
 Professor: Aydin BULUÇ · aydin@eecs.berkeley.edu

TEACHING

Teaching Assistant

Spring
2015 Queens College

Taught second semester of freshman chemistry and the corresponding lab. Created lab and recitation quizzes and was the sole arbiter as to how the courses were conducted .
 Assisted Professor: Prof. Cherice EVANS

Teaching Assistant

2015-2016 University of California, Davis

Taught freshman chemistry for two quarters. Also taught quantum mechanics for physical chemistry students.

Teaching Assistant

Winter
2020 University of California, Davis

Quantum Chemistry: a graduate level discussion of the principles of quantum mechanics and its application to (primarily) stationary state problems in atoms and molecules, including Hartree-Fock calculations of their electronic structure. Using the Psi4 quantum chemistry codes and the Python programming language we performed calculations on small molecules using restricted Hartree-Fock, unrestricted Hartree-Fock, Møller-Plesset perturbation theory (MP2), and configuration interaction (CI) and coupled cluster (CCSD) methods..

Spring University of California, Davis
2020

Teaching Assistant

Time-Dependent Quantum Mechanics: The first part of this graduate course covers the basic concepts and techniques for solving the time-dependent Schrodinger equation. The initial portion explores the concepts of quantum superpositions, Gaussian wave packets for free and interacting particles, time propagation, the Schrodinger, interaction and Heisenberg representations, time-dependent density matrices, the Wigner phase space distribution, Ehrenfest's theorem, the connection between quantum and classical mechanics in the context of molecular dynamics, the semiclassical wave packet approximation, and time-dependent perturbation theory. The second part of the course turned to applications. Those included absorption and emission of electromagnetic radiation, correlation functions and spectra, molecular dynamics, potential energy surfaces, conical intersections, nonadiabatic transitions and variational transition state theory. .

TALKS AND POSTERS PRESENTED AT CONFERENCES

- 2013 SRC Users Meeting Zachary Streeter, Kamil Krynski, C. M. Evans, and G. L. Findley, "Quasi-Free electron in near critical point hydrogen and deuterium," 2013 SRC Users Meeting, University of Wisconsin Synchrotron Radiation Center, Stoughton, WI, September 27 – 28, 2013.
- 2013 SRC Users Meeting Kamil Krynski, Zachary Streeter, C. M. Evans, and G. L. Findley, "Field ionization and photoionization of CH₃I perturbed by diatomic molecules: electron scattering in H₂, HD, D₂, O₂ and CO," 2013 SRC Users Meeting, University of Wisconsin Synchrotron Radiation Center, Stoughton, WI, September 27 – 28, 2013.
- 2014 DAMOP Cherice Evans, Kamil Krynski, Zachary Streeter, and G. L. Findley, "Field Ionization and Photoionization of CH₃I Perturbed by Diatomic Molecules: Electron Scattering in H₂, D₂, O₂, and CO," 45th Annual Meeting of the APS Division of Atomic, Molecular, and Optical Physics, Madison, WI, June 2 – 6, 2014.
- 2014 DAMOP Zachary Streeter, Kamil Krynski, C. M. Evans, and G. L. Findley, "The energy of the quasi-free electron in near critical point H₂, D₂, and O₂," 45th Annual Meeting of the APS Division of Atomic, Molecular, and Optical Physics, Madison, WI, June 2 – 6, 2014.
- 2016 APS Kamil Krynski, Zachary Streeter, C. M. Evans, and G. L. Findley, "Energy of the Quasi-Free Electron in H₂, D₂, and O₂: Probing Intermolecular Potentials within the Local Wigner-Seitz Model," American Physical Society March Meeting, Baltimore, MD, March 14 – 18, 2016.
- 2017 DAMOP Zachary Streeter, Frank Yip, Dylan P. Reedy, Allen Landers, C. William McCurdy, "Classical trajectory studies on the dynamics of one-photon double photionization of H₂O," 48th Annual Meeting of the APS Division of Atomic, Molecular, and Optical Physics, Sacramento, CA, June 5 – 9, 2017.
- 2018 ACS Cherice M. Evans, Jennifer Hare, Baxter Flor, Kamil Krynski, Zachary Streeter, and G. L. Findley, "Energy of the Quasi-Free Electron in CO and HD: Extension of the Local Wigner-Seitz Model to Polar Fluids," 225th ACS National Meeting and Exposition, New Orleans, LA, March 18 – 22, 2018.
- 2019 DAMOP Z. L. Streeter, and C. W. McCurdy, "Sequential dissociation of H₂O⁺⁺ following double photoionization" 50th Annual Meeting of the APS Division of Atomic, Molecular, and Optical Physics, Milwaukee, WI, May 27 – 31, 2019.

TECHNICAL SKILLS

Software

COMPILED · C, C++, Fortran, Cython.

PARALLEL API · MPI, OpenMP, Cuda, PETSC.

SCRIPTING · Posix, Bash, Python.

MARKUP · \LaTeX , Markdown.

Workflow

EDITOR · Vim.

MULTIPLEXER · Tmux.

VERSION-CONTROL · Git.

RESEARCH INTERESTS

Computer Science High Performance Computing

- Numerical algorithms/methods.
- Computational geometry.
- Embedded boundary conditions.
- GPU Architectures.

Theoretical Physics and Chemistry

- Quantum Information and Computation.
- Quantum Computers applied to quantum physics/chemistry.
- Nonlinear chemical reaction kinetics.
- Scattering Theory.
- Symplectic Mechanics.
- Underlying Symmetries throughout Physics.
